

THE EFFECTIVENESS OF MAGNETIC FIELD THERAPY

Magnetic fields have a long history of therapeutic use, beginning in China. The first documented magnetic field treatments occurred in Europe, and were reportedly carried out by Paracelsus at the University in Basel in 1530. Famous physicians, such as Hippocrates and H. van Bingen utilized magnetic fields for healing purposes. Yet pulsating magnetic field therapy is a relatively new form of physical therapy. Research on the biological effect of magnetic fields began in the early 1960s, and since then over 6000 scientific and imperial studies have been completed. Among the major findings of these studies is that pulsating magnetic fields improve circulation considerably, as well as increasing the presence of oxygen in the patient's tissue. This is

extremely important for supplying nutrition to parts of the body that have no direct supply of blood, such as knee cartilage and disks.

PULSATING MAGNETIC FIELD THERAPY WHAT IS PMT?

The magnetic field surrounding the earth is one of the major forces making life possible on our planet. As recent tests have shown, "civilisation diseases," particularly degenerative processes, are due to a weakened or missing magnetic field, often caused by environmental conditions. This coil produces invisible magnetic field lines which permeate the body right down to the molecular level. Upon striking the cells of the human organism, the magnetic field stimulates the cells and their healing process. The device also stimulates the "ion pump" which increases the exchange of ions between the inner cell wall and the outer cell wall. The ultimate effect is to improve the overall functioning of the cell and the entire metabolism. The magnetic field's unique

quality of reaching the molecular level allows the treatment to affect parts of the body that cannot be influenced efficiently with other methods.

WHAT TO EXPECT DURING A TREATMENT

The number of treatments and their duration will vary according to the affliction. In the case of acute diseases, the duration of the treatment is short relative to treatment for chronic diseases, and less treatments are needed. Chronic diseases and chronic-degenerative diseases require one treatment daily, if possible. After approximately 10 treatments, only three treatments per week will be needed for further improvement. You may actually feel worse after the first 2-5 treatments. This is because chronic conditions are brought into an acute stage, called the "reactive phase." This period is a sign that the body is reacting to treatment, and signals that regeneration is beginning. You will soon notice an improvement, and once the long-term healing effect begins, pain will decrease. The device can be used many different ways: locally (specific treatment of the diseased area), or on the entire body as a total treatment. For a total treatment the coil will be placed around your trunk area to allow total energy charge. Remarkable success can be achieved, especially if the application of pulsating magnetic field is combined with other medical therapies.

Pulsating magnetic Field Therapie is apy is especially suited to:

- Sports injuries such as tennis elbow
- Afflictions of the support and locomotory systems
- Acute and chronic inflammation problems
- Chronic and degenerative conditions
- Metabolic and circulatory disorders
- Delayed wound and bone healing
- Muscle Pain
- Fractures
- Arthritis
- Osteoarthritis
- Rheumatology
- Implants
