Medical Application

The potential for medical application of low intensity lasers exists in a great number of medical fields. The musculoskeletal problems most effectively treated are:

General

- repetitive stress injury
- carpal tunnel syndrome
- fibromyalgia
- reflex sympathetic dystrophy
- rotator cuff tear
- temporo-mandibular joint problems

Injuries

- ligament and tendon tears
- fractures with associated soft tissue injuries
- facet joint syndrome
- contusions subluxations

Inflammatory

- tendonitis
- myositis
- synovitis
- bursitis
- fascitis
- rheumatoid arthritis

Degenerative

- osteoarthritis
- chondromalacia patella
- discogenic and vertebrogenic
- radiculopathy
- calcifications (e.g. bone spurs)

Other Applications

- wound healing
- dermal ulcers:
 1. venous stasis
 2. atherosclerotic
 3. compression
 4. diabetic
- burns
- scar ablation
